

2x4 Reindeer Quick Holiday Project

This video is about making Reindeer out of 2x4's for the Holidays.

2x4's are construction grade lumber, so they are not typically real square or flat. I cut the 2x4 on my table saw to square it up and make the 4 sides flat.

Cut widest side first. Narrow side 2nd. As per video at www.wwgoa.com.

I use a ¼ inch band saw blade. You could use a smaller blade such as a 3/16 or 1/8 to get a tighter radius. When working with something as thick as a 2 x 4, I like to use as wide of a blade as I can. I drill a couple 3/8" holes in the work piece to give me strategic turning points.
